Author biography

Nathaniel Hawthorne was born in Salem, Massachusetts, on 4 July 1804; his ancestor John Hathorne was a judge in the Salem witch trials of 1692, a family history Hawthorne felt as a burden. He later changed the spelling of his surname to Hawthorne; why is uncertain, though many link it to his discomfort with his ancestors. After graduating from Bowdoin College in 1825 he spent years writing in near-seclusion in Salem, publishing Twice-Told Tales in 1837. He lived briefly at the utopian Brook Farm community, worked at the Salem Custom House, and achieved fame with The Scarlet Letter (1850) and The House of the Seven Gables (1851). He served as U.S. consul in Liverpool and died on 19 May 1864 in Plymouth, New Hampshire.

Historical and cultural context

Set in Padua, Italy, home to one of Europe's oldest botanical gardens (founded 1545), the story draws on Renaissance medicine and an old legend of a "poison maiden" raised on poison. Hawthorne was suspicious of scientists who treated people as experiments.

Publication and reception, then and now

First published in the United States Magazine and Democratic Review in December 1844 under the pseudonym "M. de l'Aubépine" ("hawthorn" in French); collected in Mosses from an Old Manse (1846).

Then: Admired by a small literary circle.

Now: Studied as an allegory of science without morality and of love that cannot trust.

Overview (spoiler-free)

A young student, Giovanni, falls in love with Beatrice, the beautiful daughter of a scientist whose garden is full of strange poisonous plants.

Main themes

- science without conscience.
- love and trust.
- nature versus the artificial.

Why it matters

Today's debates about genetic engineering and medical ethics echo the story.

Spoilers · teacher only

Beatrice has been made poisonous by her father; Giovanni finds that he too has become poisonous and offers her an antidote, but it kills her; she dies asking whether there was not more poison in his nature than in hers.

Student Giovanni Guasconti, lodging in Padua, watches Beatrice, daughter of the scientist Rappaccini, tend a garden of poisonous plants. He falls in love though her touch and breath kill insects and flowers. Professor Baglioni warns him and gives an antidote. Finding himself poisonous too, Giovanni turns on Beatrice; she drinks the antidote and dies, the poison having been her life. Baglioni cries out at Rappaccini's 'experiment.'

Background: Published in 1844; set in Renaissance Padua, home of Europe's first botanical garden. The garden echoes Eden.

Significance: An early literary warning about scientific ambition, often paired with Frankenstein.

Exemplar: Beatrice's body is poisonous, but Hawthorne suggests that Giovanni's suspicion is the deadlier poison. When the text says “was there not, from the first, more poison in thy nature than in mine” (Rappaccini's Daughter, paragraph 311), it shows this directly. She asks, "was there not, from the first, more poison in thy nature than in mine," and says "I would fain have been loved, not feared"; it is Giovanni's fear, not her poison, that leads to her death.

Evidence: “was there not, from the first, more poison in thy nature than in mine” (Rappaccini's Daughter, paragraph 311)

evidence, including a passage that complicates it.

Sample answer: The claim is persuasive only in part. In support, “was there not, from the first, more poison in thy nature than in mine” (Rappaccini's Daughter, paragraph 311) bears it out: She asks, "was there not, from the first, more poison in thy nature than in mine," and says "I would fain have been loved, not feared"; it is Giovanni's fear, not her poison, that leads to her death. But “Was this garden, then, the Eden of the present world” (Rappaccini's Daughter, paragraph 22) complicates it, because this detail (giovanni's question) gives the reader a second explanation to weigh against the claim's reading. So the claim holds only once it is qualified: it explains much of the story, but it has to account for that passage too, which it does not do on its own.

Writing prompts (eleven rigor levels)

Scaffolded support (250 words; AP: see unit standards): Supported track (work from the passage your teacher selects). In “Rappaccini's Daughter,” how does Hawthorne show science that poisons love? Write a paragraph that states your claim, quotes two details from the passage, and explains how each detail supports your idea. Use the symbolism you noticed as one piece of evidence.

HS Freshman (350 words; AP: see unit standards): In Rappaccini's Daughter, how does Hawthorne develop the idea of science that poisons love? State a clear claim, support it with two or three quotations, and explain how the symbolism in the story helps build that idea.

HS Sophomore (450 words; AP: see unit standards): Analyze how Rappaccini's Daughter develops the idea of science that poisons love. Make a precise claim, support it with at least three pieces of textual evidence, and explain how the author's use of symbolism and allusion shapes that idea. Address one possible counterclaim.

HS Junior (550 words; AP: see unit standards): Analyze how the structure of Rappaccini's Daughter (where it begins, turns and ends) and its symbolism shape the reader's understanding of science that poisons love. Identify one place where the text leaves matters uncertain and explain how that uncertainty adds to its meaning.

HS Senior (600 words; AP: see unit standards): Two readers disagree about what Rappaccini's Daughter suggests about science that poisons love. Lay out two plausible interpretations, weigh the evidence for each (including the story's symbolism and allusion), and argue for the stronger one in a sustained, well-organized essay.

AP (650 words; AP: AP-LIT.FIG, AP-LIT.LAN): Write a literary argument in which you analyze how Nathaniel Hawthorne uses symbolism in Rappaccini's Daughter to complicate the reader's understanding of

science that poisons love. Develop a defensible thesis, select evidence purposefully, and explain how specific choices of diction and syntax create meaning.

College Freshman (1000 words; AP: see unit standards): Situate Rappaccini's Daughter within its historical and literary context and argue how the story's treatment of science that poisons love responds to that context. Engage with at least one secondary perspective (a critic, historian or the author's own statements), integrate quotations smoothly, and cite in MLA style.

College Sophomore (1250 words; AP: see unit standards): Read Rappaccini's Daughter alongside the conventions of its genre and period. Argue how the story's handling of science that poisons love follows or bends those conventions, using the symbolism as evidence, and test your reading against one published critic. Document two secondary sources in MLA.

College Junior (1500 words; AP: see unit standards): Apply a named critical approach (for example formalist, historicist, feminist, psychoanalytic or ecocritical) to Rappaccini's Daughter and its treatment of science that poisons love. State your method, show what it reveals in the story's symbolism and allusion, and identify where the text resists it.

College Senior (2000 words; AP: see unit standards): Develop a research argument that reads Rappaccini's Daughter as evidence for a larger claim about science that poisons love in Rappaccini's Daughter. Connect close reading of the story to the whole story, engage at least four scholarly sources, and state precisely where your reading departs from theirs (Chicago style).

Graduate / PhD (2500 words; AP: see unit standards): Develop an original argument that reads Rappaccini's Daughter as a hinge in the story's larger treatment of science that poisons love. Position your reading within a named critical conversation (for example formalist, historicist, psychoanalytic, feminist or postcolonial approaches), account for the textual history where relevant, and articulate the stakes of your intervention for scholarship on Rappaccini's Daughter.
